

project type

New Academic Building

project name

Dana Engineering Building

location

Fort Wayne, Indiana

client

INDIANA TECH

scope

PEDCO was selected to design a new academic building for engineering programs at Indiana Tech. This 39,000 square foot renovation and addition was completed in 2001. The three-story facility houses labs, computer classrooms, general classrooms, and administrative areas. Structurally, underpinning of the existing building was required and a steel frame, curtain-wall design was executed.

PEDCO provided structural, mechanical, and electrical engineering design expertise for this project.
