

project type

Addition and Renovation

project name

**Norwell High/Middle
School Addition**

location

Ossian, Indiana

client

Northern Wells Community School Board

scope

PEDCO was selected to design an addition and other improvements for a high school/middle school for Northern Wells Community School Board.

This addition and renovation project consists of new and renovated locker rooms and a 3-court gymnasium with seating for 400 fans. A second level houses three new classrooms, along with mechanical space for new air handling units.

A new air-cooled chiller provides chilled water for three variable volume air handling systems. An energy-efficient two-unit variable volume system controls gymnasium relative humidity during various occupancies without the use of reheating.

PEDCO provided structural, mechanical, and electrical engineering, and plumbing design and construction administration expertise for this project.

services provided

Mechanical, Structural, Electrical, Plumbing, Construction Administration
