

case study

project type

Facility Renovation & Expansion

project name

Fabrication & Storage Expansion

location

Amelia, Ohio

client

scope

Stewart Filmscreen is at the forefront of screen technology development, and is the foremost developer of large screen displays in the world. Processes utilized at the Amelia facility have been developed to produce rear and front projection using diffusion, optical lens, and light pipe technologies. To support these processes, the facility also required the integration of bridge cranes and large layout areas to service the manufacturing area.

Stewart Filmscreen selected PEDCO based upon a recommendation they received from another satisfied PEDCO client. PEDCO was charged with creating a 22,000 square foot addition for the front of the building, which included a new marquee tower complete with a rear projection screen to showcase their product to visitors as they approach from the parking area.

project costs

\$2,200,000

services provided

Architectural, Structural, Electrical
